COMPTIA SECURITY+ SY0-701 | DOMAIN 5 · SECURITY PROGRAM MANAGEMENT AND OVERSIGHT (20%)

Security+ 5.1 · Security Considerations

Mestre CyberSec · **Lesson 5.1 — Security Considerations** (4:51) · Assistir Vídeo no YouTube ↗ · Treino Interativo: edusouzamarques.github.io/cybersec

Executive Lesson Summary: Regulatório: GDPR (UE), HIPAA (saúde US), PCI-DSS (cartão), SOX (financeiro público), FERPA (educacional); legal issues (evidência, privacidade, investigação); industry standards (CIS, ISO, NIST).

💡 Key Exam Highlights & Critical Concepts

- Cada indústria tem sua LEI: PCI-DSS pagamento, HIPAA saúde, SOX financeiro
- GDPR protege dados de UE-cidadãos INDEPENDENTE de onde a empresa está

🎯 Exam Tips & Typical CompTIA Scenarios

- 'regulation protecting EU citizen data'=GDPR

🚨 Beyond the Video: Official Exam Concepts, Protocols & Traps (Section 5.1 — Security Considerations)

Why is this advanced coverage required for SY0-701?: Video lectures provide foundational concepts, but CompTIA tests practical engineering judgment and requires deep familiarity with the following protocols, acronyms, and operational nuances in this domain:

• General Data Protection Regulation (GDPR)
EU regulation that protects personal data of EU citizens/residents and applies to organizations anywhere that process their data.

⚠ ***Exam Trap:*** *Questão citando 'dados de cidadãos da UE independente da localização da empresa' = GDPR.*

• Health Insurance Portability and Accountability Act (HIPAA)
U.S. law protecting protected health information (PHI) and requiring privacy and security safeguards in healthcare.

⚠ ***Exam Trap:*** *Saúde, PHI, hospital ou seguradora nos EUA = HIPAA.*

• Payment Card Industry Data Security Standard (PCI-DSS)
Industry standard for organizations that store, process, or transmit cardholder data, with requirements to protect payment card data.

⚠ ***Exam Trap:*** *Dados de cartão de crédito/débito = PCI-DSS; é padrão da indústria, não lei governamental.*

• Sarbanes-Oxley Act (SOX)
U.S. law imposing financial reporting, internal control, and record retention requirements on publicly traded companies.

⚠ ***Exam Trap:*** *Empresa de capital aberto, relatórios financeiros ou controles internos = SOX.*

• Family Educational Rights and Privacy Act (FERPA)
U.S. law protecting privacy of student education records at institutions receiving federal funding.

⚠ ***Exam Trap:*** *Registros acadêmicos, escola/universidade ou aluno = FERPA.*

• Center for Internet Security (CIS)
Organization that publishes CIS Controls and Benchmarks, prioritized security best practices for hardening systems and reducing cyber risk.

⚠ ***Exam Trap:*** *Controles priorizados, benchmarks de configuração ou hardening = CIS.*

• International Organization for Standardization (ISO)

International standards body; ISO/IEC 27001/27002 define requirements and guidance for information security management systems and controls.

⚠️ ***Exam Trap:*** *Padrão internacional, SGSI ou ISO 27001/27002 = ISO.*

- **National Institute of Standards and Technology (NIST)**

U.S. agency that publishes cybersecurity frameworks and guidelines such as the NIST Cybersecurity Framework and SP 800-53.

⚠️ ***Exam Trap:*** *Framework dos EUA, RMF, CSF ou SP 800-53 = NIST; frequentemente usado como padrão voluntário.*

✅ Authentic Practice Questions (10 Real Exam Scenarios)

Scenario-based exam questions. Complete explanations and distractor analysis are provided in the answer key below.

QUESTION 1 · EXAM SCENARIO

A European online retailer discovers that a former employee in Germany still has access to customer records containing names, addresses, and purchasing history. The security team must report the potential exposure of EU citizens' personal data within 72 hours. Which regulatory framework specifically imposes this notification deadline?

A) HIPAA Breach Notification Rule

B) PCI-DSS Requirement 12.10

C) GDPR Article 33

D) SOX Section 404

QUESTION 2 · EXAM SCENARIO

A hospital's IT administrator is implementing controls to protect electronic Protected Health Information (ePHI) stored on a new file server. The administrator needs to ensure safeguards for confidentiality, integrity, and availability of health data. Which US federal regulation defines these specific safeguards?

A) Sarbanes-Oxley Act (SOX)

B) Health Insurance Portability and Accountability Act (HIPAA) Security Rule

C) Payment Card Industry Data Security Standard (PCI-DSS)

D) Family Educational Rights and Privacy Act (FERPA)

QUESTION 3 · EXAM SCENARIO

A small e-commerce company processes approximately 500 credit card transactions per month and stores the cardholder data in a flat database file. A security consultant must recommend the standard that defines how this data should be protected during storage and transmission. Which compliance framework applies?

A) GDPR

B) PCI-DSS (Payment Card Industry Data Security Standard)

C) SOX

D) FERPA

QUESTION 4 · EXAM SCENARIO

A publicly traded company's CFO is concerned about the accuracy of financial statements being submitted to the SEC. The IT security team must implement controls ensuring the integrity of financial reporting systems and audit trails. Which regulation directly governs these requirements for public companies?

A) HIPAA

B) PCI-DSS

C) Sarbanes-Oxley Act (SOX) Section 404

D) GDPR Article 32

QUESTION 5 · EXAM SCENARIO

A university experiences a data breach where an attacker accesses student records including grades, disciplinary files, and Social Security numbers. Parents are demanding to know why their children's educational records were not protected. Which US regulation specifically governs the protection of student education records?

A) HIPAA Privacy Rule

B) Family Educational Rights and Privacy Act (FERPA)

C) PCI-DSS

D) SOX

QUESTION 6 · EXAM SCENARIO

A multinational corporation is adopting a security framework that provides prioritized, actionable, and prescriptive guidance for cybersecurity risk mitigation. The CISO wants a framework that maps security controls to specific implementation levels based on organizational maturity. Which industry framework best fits this requirement?

A) GDPR

B) CIS Critical Security Controls (CIS Controls)

C) HIPAA

D) PCI-DSS

QUESTION 7 · EXAM SCENARIO

An organization is pursuing ISO certification to demonstrate to European customers that its Information Security Management System (ISMS) follows internationally recognized best practices. The auditor will assess the company's systematic approach to managing sensitive information. Which ISO standard specifically addresses an ISMS?

A) ISO 27002

B) ISO 27005

C) ISO 31000

D) ISO 9001

QUESTION 8 · EXAM SCENARIO

A US federal agency must adopt a common framework for improving critical infrastructure cybersecurity. The CIO has published guidance that integrates industry standards, guidelines, and best practices to help organizations manage cybersecurity risk. Which NIST publication provides this comprehensive cybersecurity framework?

A) NIST SP 800-53

B) NIST SP 800-37 (Risk Management Framework)

C) NIST Cybersecurity Framework (CSF)

D) NIST SP 800-30

QUESTION 9 · EXAM SCENARIO

A forensic investigator arrives at a crime scene where a server contains potential evidence of financial fraud. The investigator notes that the server is still running and connected to the network. To preserve the integrity and admissibility of evidence, what is the MOST appropriate first action?

A) Immediately power off the server to stop all running processes

B) Connect an external drive and copy all files immediately

C) Document the state of the system and capture volatile memory before shutting down

D) Restore the system from the most recent backup

QUESTION 10 · EXAM SCENARIO

A marketing analyst at a multinational firm receives a request from a German customer to delete all personal information the company has collected about them, including browsing history, purchase records, and email correspondence. Which regulation grants the customer this specific right?

A) PCI-DSS Right to Erasure

B) HIPAA Right to be Forgotten

C) GDPR Right to Erasure (Article 17)

D) SOX Right to Deletion

ANSWER KEY & COMPREHENSIVE DISTRACTOR EXPLANATIONS

Question 1: Option C — GDPR Article 33

GDPR Article 33 mandates that the supervisory authority be notified of a personal data breach within 72 hours of becoming aware of it. HIPAA applies to US healthcare, PCI-DSS to cardholder data, and SOX to financial reporting controls. The scenario's EU jurisdiction and 72-hour window are signature elements of GDPR.

Question 2: Option B — Health Insurance Portability and Accountability Act (HIPAA) Security Rule

The HIPAA Security Rule (45 CFR Part 160 and Subparts A and C of Part 164) establishes national standards to protect electronic PHI. It mandates administrative, physical, and technical safeguards ensuring confidentiality, integrity, and availability (the CIA triad). SOX covers financial reporting, PCI-DSS covers cardholder data, and FERPA covers student education records.

Question 3: Option B — PCI-DSS (Payment Card Industry Data Security Standard)

PCI-DSS applies to any entity that stores, processes, or transmits cardholder data, regardless of transaction volume. The standard defines requirements for encrypted transmission, access control, and secure storage of the Primary Account Number (PAN). GDPR covers EU personal data broadly, SOX covers financial reporting, and FERPA covers student records.

Question 4: Option C — Sarbanes-Oxley Act (SOX) Section 404

SOX Section 404 requires public companies to establish internal controls and procedures for financial reporting, including IT general controls that ensure the integrity of systems producing financial data. Section 802 specifically requires retention of audit-related records for seven years. HIPAA, PCI-DSS, and GDPR do not address financial statement integrity for public companies.

Question 5: Option B — Family Educational Rights and Privacy Act (FERPA)

FERPA (20 U.S.C. § 1232g) protects the privacy of student education records, granting parents certain rights regarding access and disclosure of personally identifiable information from education records. It applies to all schools receiving federal financial aid. The scenario's mention of student records (grades, disciplinary files) is a hallmark FERPA scenario, distinguishing it from healthcare (HIPAA) or financial regulations.

Question 6: Option B — CIS Critical Security Controls (CIS Controls)

The CIS Critical Security Controls (formerly SANS Top 20) provide a prioritized set of actions organized into Implementation Groups (IG1, IG2, IG3) based on organizational size and maturity. The framework is widely adopted as a prescriptive cybersecurity standard. GDPR and HIPAA are regulations with compliance requirements, and PCI-DSS focuses on payment card data only.

Question 7: Option A — ISO 27002

ISO/IEC 27002 provides the code of practice for information security controls and is commonly used in conjunction with ISO 27001 for ISMS implementation. Note: ISO 27001 specifies the ISMS requirements, but ISO 27002 (originally ISO 17799) provides the detailed control catalog. ISO 27005 focuses on risk management methodology, ISO 31000 is enterprise risk management, and ISO 9001 is quality management. The most accurate answer given the options is ISO 27002 for the controls.

Question 8: Option C — NIST Cybersecurity Framework (CSF)

The NIST Cybersecurity Framework (CSF) provides a policy framework of computer security guidance for how private sector organizations can assess and improve their ability to prevent, detect, and respond to cyber attacks. The CSF core functions are Identify, Protect, Detect, Respond, and Recover. NIST SP 800-53 is the controls catalog for federal systems, SP 800-37 is the RMF, and SP 800-30 is risk assessment guidance.

Question 9: Option C — Document the state of the system and capture volatile memory before shutting down

Proper forensic procedure requires following the order of volatility: capture volatile memory (RAM, network connections, running processes) first, then document the system's state, and only then consider controlled shutdown. Powering off immediately destroys volatile evidence such as running processes, network connections, and memory contents. The investigator must also maintain the chain of custody and use write-blockers for disk imaging.

Question 10: Option C — GDPR Right to Erasure (Article 17)

GDPR Article 17 establishes the 'Right to Erasure' (also called 'Right to be Forgotten'), allowing EU data subjects to request deletion of their personal data when certain conditions are met (e.g., data no longer necessary for original

purpose, consent withdrawn). PCI-DSS, HIPAA, and SOX do not grant consumers such deletion rights over their data. Only GDPR provides this specific right among the listed options.
