EDUARDO DE SOUZA MARQUES

AI Evaluation Specialist • Trust, Safety & Cybersecurity Reasoning

Brazil (Remote Worldwide) edusouzam85@gmail.com linkedin.com/in/edusouzamarques github.com/edusouzamarques

edusouzamarques.github.io/cybersec

PROFESSIONAL SUMMARY

Analytical and detail-oriented technical evaluator with extensive expertise in evidence verification, objective protocol compliance, and anomaly detection derived from a 13.5-year career in public safety investigations, followed by directing international consular operations. Active builder in AI safety and guardrails (author of 14 open-source Python libraries with 3,500+ tests). Certified in Google Cybersecurity Foundations, trained in hands-on offensive security labs (TryHackMe), and advancing towards CompTIA Security+. Combines native Brazilian Portuguese linguistic precision with professional English fluency to evaluate multi-turn LLM reasoning, adversarial jailbreaks, and policy alignment with zero margin for speculation.

EVALUATION COMPETENCIES & METHODOLOGY

HHH Framework Evaluation: Rigorous rating of Helpfulness, Harmlessness, Honesty, and instruction following.

Factual Fact-Checking: Deep-dive verification of claims, citations, and hallucination detection.

Linguistic Precision: Native PT-BR idiomatic nuance, syntax, and formal tone adaptation.

Adversarial Red-Teaming: Identifying prompt injection, jailbreaks, implicit bias, and boundary evasions.

Safety & Policy Alignment: Enforcing strict safety policies, content guardrails, and refusal boundaries.

Asynchronous Delivery: Clear written English rationales, Markdown documentation, Git workflows.

RELEVANT EXPERIENCE

Autonomous AI Systems & Workflow Engineer • Pixel Pro Ads / Independent — 2024 – Present

- Evaluated hundreds of multi-turn conversational prompts across frontier LLMs, rating outputs on HHH criteria and strict instruction-following.
- Conducted in-depth pairwise evaluations on Portuguese and English outputs, identifying subtle hallucinations and reasoning errors.
- Authored 14 open-source Python libraries for AI safety, runtime guardrails, and deterministic evaluation with 3,500+ automated tests.
- Executed adversarial red-teaming prompts to stress-test model safety boundaries, jailbreak vulnerabilities, and refusal calibration.

Investigative & Operations Specialist • Polícia Militar de Minas Gerais (PMMG) — 2006 – 2019 (13.5 yrs)

- Conducted analytical investigations requiring evidence verification, anomaly detection, and adherence to strict operational protocols.
- Synthesized ambiguous multi-source data into objective, factual reports under strict evidentiary standards with zero tolerance for speculation.
- Applied systematic critical thinking and objective analysis in high-consequence environments, identifying discrepancies and non-compliance.

TECHNICAL CERTIFICATIONS & CONTINUING EDUCATION

- **Google Cybersecurity Professional Certificate** – Google / Coursera (Foundations of Cybersecurity, NIST CSF, Threat Analysis).
- **TryHackMe • Hands-on Cybersecurity:** Intro to Offensive Security (Hands-on labs: offensive security methodology, web exploitation vectors, ethical hacking workflows).
- **Cisco Networking Academy** – Python Essentials 1 (PCEP Track) • Linux Operating System Fundamentals.
- **CompTIA Security+ (SY0-701) & GRC Standards** – In Progress (Identity & Access Management, Cryptography, Security Architecture).

EDUCATION

Higher Technology Degree in International Trade (Comércio Exterior) — UNINTER • Curitiba, Brazil

Technical Degree in Public Safety (CTSP) — Polícia Militar de Minas Gerais (PMMG) • Brazil

LANGUAGES

Portuguese: Native (C2) – Master-level grammar, idiomatic nuance • **English:** Professional Working Proficiency (B2/C1) – Fluent in analytical writing, technical documentation & prompt evaluation delivery.
